humidity and electronics corrosion reliability issues and preventive measures provides comprehensive information on humidity related corrosion reliability issues surrounding electronics and how to tackle potential issues from a pro active design prevention perspective the book contains a mix of academic and industrial relevance making it suitable for a detailed understanding on humidity issues on electronics both for materials and corrosion experts and electronics and electrical experts it will be useful for researchers academics and industrial personals involved in materials corrosion and electronics reliability aspects provides basic and applied knowledge surrounding corrosion in electronics combines electronics electrical and electrochemical aspects related to failure modes and mechanisms presents knowledge on influencing factors and how they can be used as preventive measures at the material component device and system level

the definitive prescriptive nature of the exposure classes for concrete susceptible to reinforcement corrosion in the european standard en 206 does not adequately describe the enhanced risks of possible changing ambient environments in the lifetime of the steel reinforcement nor does it quantify the risk of reinforcement corrosion for more constant environments one reason for this may be the variable environmental conditions across europe and the differing practices in the member states a more robust environmental classification is needed based on a better understanding of the variation of moisture with depth under changing external conditions and of the resulting rate of corrosion of the steel reinforcement this digest reviews recent models and data and presents supplementary information to en 206 for the uk based on industry practices and environmental data
